Cody Snider

cody@codysnider.com | 347-988-9281

Summary

Highly skilled and results-driven professional with expertise in SRE, DevOps, and Go application development. Proven track record of implementing architectural solutions, optimizing infrastructure, and driving cost savings. Strong experience in metrics system migration, containerization, and automation. Excellent leadership and mentoring abilities.

Experience

Machine Learning Contractor

Feb 2024 - Current

- Partnered with multiple AI startups as an independent contractor, delivering scalable machine learning solutions.
- Specialized in training and inference pipelines for LLMs, diffusion models, classifiers, and image recognition/analysis systems.
- Designed and deployed training and inference infrastructure across AWS, RunPod, Modal, and on-premises Debian systems equipped with Nvidia GPUs.

Career Break

Aug 2023 – Feb 2024

- Focused on personal growth and family time while maintaining technical proficiency through side projects.
- Took on part-time SRE contract work, ensuring hands-on experience with infrastructure and automation tools.
- Developed expertise in machine learning models during a self-guided study, leading to contract work for AI startups.

Poloniex

Staff Engineer | Jan 2022 – Jul 2023

- Planned and implemented the transition of the metrics system from Datadog to Prometheus + Grafana.
- Championed the transition of ECS from reserved instances to spot instances.
- Revamped the Docker build system to support multi-architecture for both cloud and local development.
- Developed in-house developer tools targeting MacOS (including M1).
- Conducted extensive Docker work for local development and deployment pipelines.

Health Recovery Solutions

Lead DevOps Engineer | Jan 2020 – Jan 2022

- Achieved ~$50k/month infrastructure spending reduction through optimization of network traffic and instance sizing.
- Managed 1k+ spot instances across 10 ECS clusters, with 5-10 services per cluster per environment.
- Led the migration from manual administration to Infrastructure as Code (IaC) using Terraform.
- Recruited and mentored a team of 3 engineers to establish a DevOps department.
- Handled diagnostics and recovery during outages, established post-mortem reporting procedures.
- Implemented Prometheus and Grafana for metrics monitoring, replacing costly Datadog service.

PrivCo

Senior Software Engineer | Sep 2018 – Jan 2020

- Reduced annual AWS operating costs from $66k to $43k.
- Led full system refactor to modernize a legacy Zend Framework 1, PHP 5 based application to PHP 7.
- Migrated application servers from single Zend Server to load-balanced, Docker-based ECS containers.
- Implemented code standards and collaborative workflow for development staff.

Hearst

Software Engineer | Nov 2017 – July 2018

- Developed Yii2, Flask, and Django web applications and microservices.
- Designed and implemented Flask-based API for product review service.
- Defined requirements, service architecture, and implementation timeline for a large, company-wide SEO service.

Makespace

Senior Software Engineer | Apr 2017 – Nov 2017

- Developed Django-based API using the Django REST Framework.
- Conceptualized and implemented an in-warehouse object measurement system using OpenCV and Raspberry Pi.
- Designed and deployed in-warehouse barcode scanners using Motorola imagers and Android.
- Implemented CI system using Jenkins.
- Managed deployments through AWS and Jenkins CI.

Makerbot Industries

Senior Software Engineer | Mar 2016 – Jan 2017

- Developed backend web services for third-party and internal APIs.
- Enhanced security and user features in the Thingiverse PHP web application.
- Developed SDKs in Python and C for firmware integration to analytics and network suite.
- Implemented communication protocols between printer firmware and backend services.
- Migrated services from Node.js to Go.
- Deployed all services using Docker on AWS.

Upright Citizens Brigade

Senior Software Engineer | Jan 2013 – Mar 2016

- Achieved annual infrastructure cost reduction from $38k to $12k.
- Developed multiple PHP-based applications to replace legacy systems.
- Led core system architecture design and decisions.
- Managed a team of 2 additional developers.
- Managed server infrastructure and DevOps for scalable, cloud-based RHEL-based machines.

CollegeHumor (Connected Ventures/IAC)

Software Engineer | Aug 2011 – Nov 2013

- Developed PHP-based application backend and implemented Lucene search and content system using Python (webpy framework) with JCC and Java.
- Made core system architecture decisions.
- Sole backend developer responsible for deploying Jest.com within 2 months.

HiDef Web

Software Engineer | Jan 2011 – Jul 2011

- Authored a stats system using Zend Framework backend, incorporating HTML5 generation technologies such as web sockets, local storage, and CSS3.
- Developed frontend AS3 elements using Flash Builder 4.
- Implemented backend PHP using strict, documented OOP practices following the MVC design pattern.

Active Website (Booj)

Junior Software Engineer, Software Engineer | Jan 2008 – Dec 2010

- Developed in-house Python systems for rank monitoring and keyword research using a proprietary KEI algorithm.
- Implemented requests using a proprietary framework based on CodeIgniter and Smarty, adhering to XHTML 1.0 strict standards and Prototype-compliant Javascript.
- Developed frontend AS3 elements using Flex Builder 3.
- Implemented backend PHP using strict, documented OOP practices following the MVC design pattern.

Brand Function

Junior Software Engineer | Jun 2006 – Dec 2008

- Developed PHP/AJAX CMS for deploying small, “business card” websites.
- Interacted with clients to manage frontend and functionality changes.
- Developed frontend AS3 elements using Flex Builder 3.
